1.   Set this PowerBI-jupyter-notebookV1.json file to this give path

C:\Program Files(x86)\Common Files\Microsoft Shared\Power BI Desktop\External Tools

2.   Set this powerbinotebook.py file to this give path

Create folder PYTOM on desktop and copy that path and paste in Below

Location :

3 . set ssas_api.py file to give path
For set ssas_api.py file find out jupyter_base location in pc and after that find out
Scripts option . Also checkout your Anaconda path in .json (.json file from step 1).
C:\py_env\jyupter_base\Scripts

4. Install pythonnet for **Calling .NET code from Python. In python env .**
```
pip install pythonnet
```
